Z80 CROMIX-10

Date: July 16, 1984

Product: CROMIX-L and CROMIX-S

Release: 11

Date production of this version began: July 16, 1984 on 8"
July 16, 1984 on 5"

First serial number with this version: 11-10000 on 8"
11-10000 on 5"

SUMMARY

Version 11.27 of the Z80 Cromix[®] Operating System is now available.

CORRECTIONS AND ENHANCEMENTS

Using STDC drives with the Z80 Cromix Operating System

Because the Z80 Cromix Operating System cannot use STDC drives in interrupt mode, the following changes have been made:

1. The file **initstdc.bin** has been changed to recognize which type of Cromix is running. If running under the Z80 Cromix Operating System, **initstdc.bin** will not run in interrupt mode, and it will properly decode its execution address.
2. The files **stinton.bin** and **stintoff.bin** are no longer necessary under Z80 Cromix. They have been removed from the distribution diskette.

023-9605

The Copy and Move Utilities

Previous versions of **copy.bin** and **move.bin** did not always preserve the date and time of copied files. This has been corrected.

The Update2 Command File

When updating the **/etc** directory from disk 2, the command file **update2.cmd** now uses the Copy utility with specific filenames (rather than using the generalized Cptree utility). This prevents user-configured files in the **/etc** directory from being overwritten if disk 1 is mistakenly used for updating instead of disk 2.
